Social engineering is a Simulated Attack Against Your Staff

Simulated Attack

Your staff members are the first line of defence against attackers, and it is becoming more and more common for attackers to simply phone a company and trick a staff member into giving them access to a customer or staff account, or other valuable system. This is known as social engineering, and is becoming increasingly prevalent as an attack vector.

Social engineering is a simulated attack against your staff, which takes place either over the phone, via your helpdesk solution or via your webchat solution. The purpose of the simulation is to attempt to gain access to valid customer accounts, or to trick the staff member into divulging sensitive information.

Our testers will enumerate the potential attack surface for social engineering, carry out research into your business, the targeted staff members, and your customers prior to launching the simulated attack. They will attempt

The types of social engineering we offer

- **Baiting.**
- **Phishing.**
- **Spear Phishing.**
- **Vishing.**
- **SMSishing**
- **Pretexting.**
- **Scareware.**
- **Dumpster Diving.**

What are the benefits of Social Engineering?

As with more traditional types of security assessment, the benefit of social engineering is that it enables you to safely identify potential gaps in your security posture, and address those gaps before attackers exploit them in the real world. Find out how well aware of potential threats your staff are, and identify gaps in your processes which could allow attackers to breach your organisation via a social engineering attack.

What will we find in a Social Engineering?

The outcome of a social engineering test is typically that our testers have gained unauthorised access to one or more of your systems or applications. You will receive a report detailing the actions we took, how we gained access and what weaknesses we exploited to do so.

WHO WE ARE

A Team Of Highly Qualified Professionals With:

**Advanced Penetration Skills And Ethical Profile.
Internationally Recognized Professional Certifications.
Years Of Proven Experience In The Field.
Advanced Attacking Skills On Different Aspects Of Security.**

World Class Penetration Testing

DAVICYBER
Protect, Prevent and Pursue
